

Girish Dhanakshirur is an IBM Distinguished Engineer, CTO, and Vice President of Engineering for IBM Cloud. With more than 30 years of experience in the technology industry—spanning leadership roles in both the United States and India—he has played a key role in shaping enterprise cloud strategies and driving innovation at scale. As Cloud CTO and Chief Architect, he has led the architecture and delivery of digital services using cloud-native, containerization, and DevOps principles, guiding global enterprises through their digital transformation journeys.

Throughout his career, Girish has combined strategic vision with deep technical expertise in cloud, AI, and data technologies. He has contributed extensively to next-generation product development, holds multiple patents, and is recognized as an IBM Master Inventor with 20+ patents, and member of the IBM Academy of Technology. A respected industry voice, he frequently speaks at conferences, publishes in technology journals, and engages with global technology leaders on emerging trends and innovation.

Beyond his corporate leadership, Girish is deeply committed to mentorship and academic engagement. He regularly delivers technology talks and webinars, supporting the growth of engineering talent and fostering innovation within the broader ecosystem. He also serves as a visiting faculty member in computer science engineering and contributes to academic advisory initiatives, strengthening collaboration between industry and academia.
